

EVENTRA

• LIVE IN PRODUCTION

The complete platform for professional event planners

From user research to a shipped, installable web app — Eventra runs weddings and events end to end: budgets, vendors, tasks, analytics, and a client-ready portfolio, all in one place.

Solo founder + PM

Research-driven

Shipped & live

PWA installable

Arpita Gupta Founder & Product Manager · MBA, Data Science & AI, IIT Mandi · Product Case Study 2026

Eventra at a glance

A working product — not a mockup. Eventra is an operating system for event professionals, validated with real planners and shipped to production.

What it is

A complete platform to manage events, budgets, vendors, tasks and a client-facing portfolio — in one place.

Who it's for

Professional planners — weddings first, plus corporate, academic and social event coordinators.

Status

Live in production, PWA-installable, desktop-first. Multi-event, multi-user, real-time.

My role

Solo — research, product strategy, UX, full-stack build, and go-to-market.

Free to start

Freemium, zero friction

FOUNDER'S NOTE

I researched it. I designed it. I built it. I shipped it.

Eventra began as a question, not a codebase: why do the people who run our most important events still work from spreadsheets, WhatsApp threads and paper receipts? I interviewed planners, mapped the workflow, prioritised ruthlessly, designed the experience, and built and deployed the product myself — then repositioned it from an academic tool into a platform for professional planners.

Discovery & research

Product & UX design

Full-stack build

Go-to-market

One person. Full product lifecycle.

Six-figure events, run on spreadsheets and hope

A single wedding spans multiple functions, dozens of vendors, and budgets from ₹10 lakh to ₹1 crore+ — coordinated across WhatsApp groups, shared Excel files and paper receipts. There is no single source of truth, and no client-facing polish.

No single source of truth

5+ disconnected tools per event — nothing reconciles.

No real-time budget visibility

Overruns surface after the event, during manual reconciliation.

Spreadsheet fragility

Version conflicts, broken formulas, zero audit trail.

Vendor payment chaos

Quotes, advances and balances tracked in someone's head.

Broken approval chains

Sign-offs happen over chat — nothing is structured or logged.

No client-facing polish

Planners have no simple, professional way to show their work.

VALIDATED PAIN

#1

Budget tracking named the top pain, unanimously

Excel

The default financial tool for nearly every planner

Post-event

When most overruns are discovered today

Research before a single line of code

I started with the workflow, not the product. Structured conversations across the people who touch an event revealed where the money, time and trust leak out.

Planners & coordinators

The daily drivers — budgets, vendors, teams.

Finance & approvers

Own accountability and sign-off on spend.

Vendors & clients

Where quality, payments and trust are judged.

WHAT I HEARD

Budget control

The #1 unmet need, named by every planner

Real-time truth

"I only know the number after it's too late"

Coordination

Tasks and vendors scattered across chats

Credibility

No polished way to win the next client

Four stakeholders, four jobs to be done

Priya — Wedding Planner

Primary user

Goal Run flawless events and win the next client.

Pain Everything lives in her head and ten chat threads.

JTBD Manage every event, budget and vendor from one screen.

Arjun & Meera — Clients

The couple

Goal See progress and spend without chasing the planner.

Pain Anxious, in the dark, asking for updates constantly.

JTBD Get a clean, shareable view of their event's status.

Raj — Vendor

Service partner

Goal Get booked, deliver, and get paid on time.

Pain Quotes and balances tracked informally, disputes arise.

JTBD Clear scope, tracked payments, on-time settlement.

Rashi — Coordinator

Team member

Goal Know exactly what to do, when, and where.

Pain Task hand-offs get lost; ownership is unclear.

JTBD See assigned tasks, deadlines, and mark them done.

The jobs Eventra is hired to do

Framing needs as jobs — not features — kept the build anchored to outcomes planners actually care about.

When I'm mid-event, **I want to see exactly where the budget stands** — *so I can stop overruns before they happen.*

When work is spread across my team, **I want to assign and track every task in one place** — *so nothing slips through the cracks.*

When vendors send quotes and bills, **I want quotes, advances and balances tracked automatically** — *so I always know who's owed what.*

When I meet a new client, **I want to share a polished portfolio of past work** — *so I can win the booking on the spot.*

Matching real pains to product value

THE PLANNER

Jobs

- Deliver flawless multi-function events
- Keep spend inside budget
- Win and retain clients

Pains

- Budget blind spots
- Scattered tasks & vendors
- No professional showcase

Gains

- Confidence & control
- Time back
- A credible brand

EVENTRA DELIVERS

Products

- Real-time budget & analytics engine
- Unified tasks, calendar & vendors
- Client showcase + shareable link

Pain relievers

- Live spend vs budget, always current
- One workspace, full audit trail
- One link replaces a pitch deck

Gain creators

- PDF reports in one click
- Receipts + structured approvals
- PWA — installable, always on hand

07 — POSITIONING

For professional event planners who run high-value, multi-function events, Eventra is **the platform** that unifies budgets, vendors, tasks and a client-ready portfolio — unlike spreadsheets and generic project tools, because it is purpose-built for how events actually run.

PRODUCT PRINCIPLES

Budget is the spine

Every screen ties back to money in vs money out.

Real-time or nothing

A number you can't trust live is worse than no number.

Respect the client

The planner's reputation is a first-class feature.

Ship the 90%

A great web app beats a delayed native one.

One workflow, end to end

1

Onboard by role

Pick your event type — the workspace tailors itself.

2

Create the event

Client, dates, venue, functions, and budget by category.

3

Build the team

Invite members; role-based access to the right events.

4

Run operations

Tasks, calendar, vendors, expenses & receipts — live.

5

Track & approve

Real-time analytics; structured expense approvals.

6

Report & share

One-click PDF and a shareable client showcase link.

Multi-function events, budgeted to the rupee

Real weddings aren't one event — they're five. Eventra models each function with its own budget, then rolls everything into a single financial picture.

- **Functions as first-class objects**
Mehendi, Haldi, Sangeet, Baraat, Reception — each with its own budget and timeline.
- **Budget by category**
Allocate across venue, catering, decor, photography and more — 10 categories.
- **Live utilisation**
A running % of budget used, updated the moment an expense is logged.
- **Board-ready overview**
Export the full event summary as a client- or finance-ready PDF.

Kapoor Wedding

₹14,35,000 spent of ₹50,00,000

29% used

	Mehendi	₹8,00,000
	Haldi	₹3,00,000
	Sangeet	₹12,00,000
	Baraat & Wedding	₹18,00,000
	Reception	₹9,00,000

Financial intelligence, not just tracking

Spend by category

See exactly where money goes — catering, decor, venue — as a live breakdown.

Budget burn over time

Expected vs actual spend across the event timeline, so drift is visible early.

Vendor payments

Quoted vs paid vs balance — ₹28.5L quoted, ₹9.8L paid, ₹18.7L outstanding.

Operational health

Task progress and approval status alongside the financials.

Every rupee logged, approved and traceable

Receipts on every expense

Attach a receipt to any expense; filter instantly for anything missing one.

Structured approvals

Pending → Approved → Rejected — a real workflow, not a chat message.

Vendor directory

Every vendor, service, contact and payment status in one place.

Quote-to-settlement

Track quoted, paid and outstanding balances per vendor automatically.

Coordination that replaces the group chat

Task management

Assign, prioritise and track — 13 tasks, 7 active, delays surfaced automatically.

Unified calendar

Events, functions, payments and tasks — colour-coded on one timeline.

Team & roles

Invite members by email; role-based access to only their events.

Live activity feed

Every assignment and completion logged for full accountability.

ONE CALENDAR, EVERY MOVING PART

Events

Functions

Payments

Tasks

July 2026 — from vendor payment reminders to the Baraat, every date planners actually track lives on a single view.

The client experience — Eventra's edge

Three shipped features that generic tools simply don't have — and that turn a planner's back-office into a client-winning asset.

Showcase portfolio

Turn completed events into a beautiful, public portfolio of your work.

One shareable link

Send prospective clients a single link — no deck, no PDF attachment.

One-click PDF export

Generate a polished event or financial report instantly, ready to send.

Why existing tools fall short

	Multi-function budgeting	Real-time analytics	Vendor payments	Receipts + approvals	Client showcase & share	Purpose-built for events
Spreadsheets (Excel)	✕	✕	✕	✕	✕	✕
Generic PM (Trello/Asana)	✕	🕒	✕	🕒	✕	✕
Wedding checklist apps	🕒	✕	🕒	✕	🕒	✅
Eventra	✅	✅	✅	✅	✅	✅

Only Eventra combines event-native budgeting, real-time analytics, vendor payments, structured approvals and a client-facing showcase in one platform.

What compounds over time

Event-native data model

Functions, budgets, vendors and approvals modelled the way events truly work — hard for horizontal tools to retrofit.

Data flywheel

Every event adds financial and operational data that powers benchmarks and future AI prediction.

Client-side distribution

Shared showcase links put Eventra in front of the planner's next clients — built-in, organic reach.

Workflow lock-in

Once budgets, vendors and history live here, Eventra becomes the system of record.

Ruthless scope control: MoSCoW + RICE

MUST

- Real-time budget tracker
- Multi-function events
- Expenses + receipts
- Role-based access

SHOULD

- Analytics dashboard
- Vendor payments
- Calendar & tasks
- PDF export

COULD

- Client showcase + share
- Push notifications
- Activity feed
- PWA install

WON'T (yet)

- Native iOS/Android
- AI budget prediction
- Vendor marketplace
- Multi-tenant SaaS

RICE — how the top bets ranked

Feature	Reach	Impact	Confidence	Effort	Score
Real-time budget tracker	High	Massive	High	Med	★★★★★
Client showcase + share	Med	High	High	Low	★★★★☆
Vendor payment tracking	High	High	Med	Med	★★★★☆
AI budget prediction	Med	High	Low	High	★★★☆☆

North Star, funnel and KPIs

NORTH STAR METRIC

% of events completed within $\pm 5\%$ of planned budget

Real financial discipline — not just visibility. It proves the product changed the outcome.

Acquisition

Sign-ups via showcase links & referrals

Activation

First event created + budget set

Retention

Planner returns for their next event

Referral

Shares a showcase / invites team

Revenue

Upgrades to a paid tier

KPIs BY PRODUCT AREA

conversion

Intelligence that compounds with every event

Eventra collects the exact data that makes AI valuable: real budgets, real vendors, real outcomes. AI ships only once there's enough history to make it trustworthy.

Budget prediction

Data-driven baselines from past events

Impact: 20–30% fewer overruns on the first pass

Anomaly detection

Flag duplicate or inflated expense claims

Impact: Near-zero duplicate submissions

AI report summaries

Auto-generate post-event write-ups

Impact: Hours of reporting cut to minutes

Smart task priority

Surface what needs attention now

Impact: Fewer day-of operational surprises

Risk scoring

Predict budget & timeline risk early

Impact: Proactive intervention, not post-mortems

Vendor recommendations

Suggest vendors from institutional history

Impact: Lower cost, faster procurement

From shipped MVP to intelligent platform

PHASE 1

Shipped

Live now

- Multi-function events
- Real-time budget tracker
- Expenses + receipts
- Vendors & payments
- Analytics dashboard
- Tasks, calendar & team
- Showcase + share link
- PDF export · PWA install

PHASE 2

Next

0–6 months

- Push notifications
- Native iOS / Android
- AI report summaries
- Deeper client portal
- Payment reminders

PHASE 3

Intelligence

6–12 months

- AI budget prediction
- Anomaly detection
- Risk scoring
- Smart vendor recs

PHASE 4

Scale

9–24 months

- Multi-org SaaS
- Integrations / API
- Vendor marketplace
- Cross-event benchmarks

The hardest 90% — the working product — already exists. What's left is intelligence and scale.

A large, underserved, high-value market

₹1,200 Cr

India's wedding & events industry — one of the world's largest, and famously spend-heavy.

₹300 Cr

Planners & agencies who would pay for software to run events end to end.

₹15 Cr

Professional planners reachable via showcase-link virality and referral in 3–5 years.

WHY NOW

Weddings are back — bigger

Post-pandemic spend per event is rising, not falling.

Planners are professionalising

More agencies, more staff, more need for real tooling.

Tools haven't caught up

The market still runs on Excel and WhatsApp.

Mobile-first, cloud-native

A PWA reaches every planner with zero install friction.

Figures are indicative market context, not audited estimates.

Land, expand, monetise

01

LAND

Free tier for individual planners

- Ship free, frictionless sign-up
- Win a beachhead of active planners
- Tight feedback loop, weekly iteration
- Every showcase link is a growth ad

 First 100 active planners

02

EXPAND

Agencies & multi-planner teams

- Team invites drive seat expansion
- Referral + campus/agency ambassadors
- Templates for common event types
- Case studies from real weddings

 Multi-seat agency accounts

03

MONETISE

Paid tiers + AI upsell

- Institutional / agency subscription
- AI features as premium upsell
- Vendor & payment partnerships
- Community-led PM positioning

 Recurring subscription revenue

Freemium to paid, AI as the upsell

Starter

Free

Individual planners

- 1 active event
- Core budget & tasks
- Receipts & expenses
- Showcase + share link

Professional

MOST POPULAR

₹4,999

per month · most popular

- Unlimited events
- Full analytics & PDF export
- Vendor payment tracking
- Team seats & roles

Enterprise

Custom

Agencies & institutions

- Everything in Professional
- AI prediction & insights
- Priority support & SLAs
- API & integrations

UNIT ECONOMICS LOGIC

Low CAC — Showcase links & referrals drive organic sign-ups

Sticky retention — Budgets & history make Eventra the system of record

Expansion revenue — Seats + AI upsell grow account value over time

What I chose not to build — and why

Scope

PWA before native app

A responsive PWA delivers ~90% of native value with none of the 3–4 month delay. Native comes once web workflows are validated.

Prioritisation

No AI at launch

Budget prediction needs history to be trustworthy. Shipping AI without data creates false confidence — worse than none.

Strategy

Single-org before SaaS

Multi-tenancy is heavy infrastructure. One deep, real deployment yields better product insight than spreading thin.

Focus

No vendor marketplace at MVP

Valuable but not mission-critical. Adding it early would fragment focus before the core workflow was solved.

UX

Approvals as workflow, not automation

Kept humans in the loop on money. Structured sign-off beats brittle auto-approval that erodes trust.

Simplicity

Online-first, no offline sync

Offline introduces heavy conflict complexity for marginal gain. Simpler architecture means faster iteration.

Not a college project — a shipped product strategy.

Real problem

Grounded in research with real planners — budget control was the unanimous #1 pain.

Smart solution

Budgets, vendors, tasks and client showcase unified where generic tools fail.

PM depth

JTBD, MoSCoW + RICE, KPIs, North Star, honest tradeoffs — end to end.

Market path

Large underserved market with a clear GTM, pricing and AI expansion path.

What building Eventra taught me:

ship the 90%, let real data earn the AI, and treat scope you cut as a decision — not a limitation.
